

PROBLEM STATEMENT

News is that aspect of communication that informs us about the evolving events, problems, and people in the outside world. However, as humans, we sometimes find it difficult to keep track of the passing of time. where there is more than just the 7pm television broadcast. In order to address this, we will develop a programme that offers up-to-date, reliable news that can be delivered on schedule and that can be relied upon to be accurate in all respects. Additionally, this programme offers category-specific news on indices, commodities, currencies, future rates, bonds, etc., making it easy for users to choose the category they want to read about. Additionally, it might offer a news section to visitors who are interested in a particular position. Additionally, the news offers user-friendly terminology that is required by the audience. In order to create a user-friendly application, make sure the app has the bare minimum of data. Additionally, the usage of mobile devices has increased over the past year, which has led to an increase in the use of mobile applications.
